Website QA report

Marlowe Studio · demo store

Date: 2026-10-30

88	0	1	1	2
HEALTH SCORE	Critical	High	Medium	Low

6 pages · 3 screen sizes · 44 links checked

Executive summary

We found 4 problems: 0 critical, 1 high, 1 medium and 2 low.

Fixing the critical and high items takes about 20–60 min of development work; everything, about 1.0–2.1 h.

What this means for the business

- Some content is hard or impossible to use for people with low vision or screen readers.
- Google has no summary to show under your pages.

Recommended order: critical items first, then high, then the rest in the next update.

Fix these first

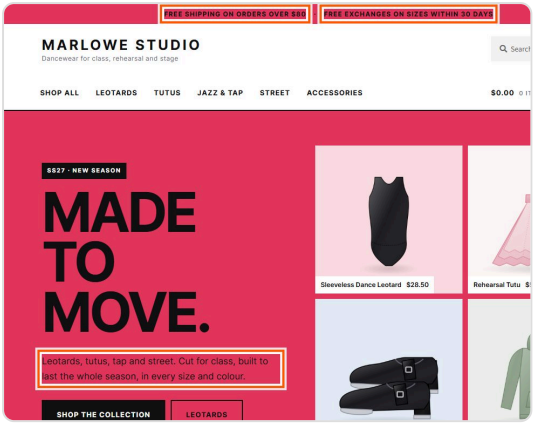

HIGH Accessibility issue

`Elements must meet minimum color contrast ratio thresholds`

Where: /, /product-category/jazz-tap/, /product-category/leotards/, /product-category/street-hip-hop/ (+2)

Rule: color-contrast · **Affected:** 36 elements

`.ms-announce > span:nth-child(1)` `.ms-announce > span:nth-child(3)` `.ms-lede`

How to fix: Fix the elements listed so the page works with screen readers, keyboards and low vision.

Estimated fix: 20–60 min

MEDIUM No meta description

Where: /, /shop/, /product-category/leotards/, /product-category/tutus/ (+2)

How to fix: Add a meta description of about 150 characters; search engines often show it under the title.

Estimated fix: 30–35 min

LOW Check by hand: accessibility

`Elements must meet minimum color contrast ratio thresholds`

Where: /, /product-category/jazz-tap/, /product-category/leotards/, /product-category/street-hip-hop/ (+2)

How to fix: The checker could not decide (for example text over an image or gradient). Look at these elements yourself, or with a contrast picker.

Estimated fix: 5–15 min

LOW Check by hand: accessibility

`Elements must only use permitted ARIA attributes`

Where: /shop/

How to fix: The checker could not decide (for example text over an image or gradient). Look at these elements yourself, or with a contrast picker.

Estimated fix: 5–15 min

All findings

Critical · 0

No problems found in this category.

High · 1

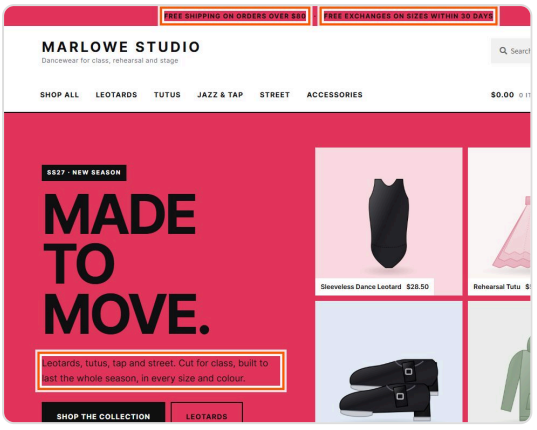

HIGH Accessibility issue

`Elements must meet minimum color contrast ratio thresholds`

Where: /, /product-category/jazz-tap/, /product-category/leotards/, /product-category/street-hip-hop/ (+2)

Rule: color-contrast · **Affected:** 36 elements

`.ms-announce > span:nth-child(1)` `.ms-announce > span:nth-child(3)` `.ms-lede`

How to fix: Fix the elements listed so the page works with screen readers, keyboards and low vision.

Estimated fix: 20–60 min

Medium · 1

MEDIUM No meta description

Where: /, /shop/, /product-category/leotards/, /product-category/tutus/ (+2)

How to fix: Add a meta description of about 150 characters; search engines often show it under the title.

Estimated fix: 30–35 min

Low · 2

LOW Check by hand: accessibility

`Elements must meet minimum color contrast ratio thresholds`

Where: /, /product-category/jazz-tap/, /product-category/leotards/, /product-category/street-hip-hop/ (+2)

How to fix: The checker could not decide (for example text over an image or gradient). Look at these elements yourself, or with a contrast picker.

Estimated fix: 5–15 min

LOW **Check by hand: accessibility**

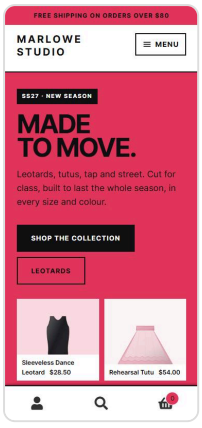

`Elements must only use permitted ARIA attributes`

Where: /shop/

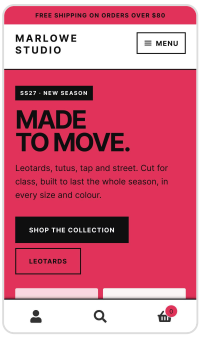

How to fix: The checker could not decide (for example text over an image or gradient). Look at these elements yourself, or with a contrast picker.

Estimated fix: 5–15 min

Next steps

This report shows what needs attention. If you like, we can fix it and keep the site healthy.

Diagnosis

US$ 60

This report, for up to 10 pages.

- Three screen sizes
- Accessibility, speed and links
- Priorities and how to fix

Fixes

from US$ 100

We fix the critical and high items in this report.

- Fixed quote per item
- A new report after the fixes
- Nothing changes without your approval

Monitoring

US$ 30 / month

Automatic check every week.

- Alert when something breaks
- Monthly report
- Cancel any time

Prices per site. Online stores can add a checkout test, quoted separately.

How this report was made

Each page was loaded in a real Chromium browser at 375, 768 and 1280 px. The report records console errors, failed requests and sideways scrolling; checks accessibility with axe-core (WCAG 2.1 A and AA rules); measures Largest Contentful Paint, Cumulative Layout Shift and page weight; reads titles and descriptions; and requests every link found. The first pages were also opened in WebKit (the engine behind Safari) as an iPhone, and in Firefox. A first visit with no consent given recorded which trackers load and which cookies are set. Fix times are estimates for a developer who knows the site. robots.txt was respected and no form was submitted.

> Automated checks find many problems but not all of them. This report is not a legal accessibility, privacy (GDPR/LGPD) or compliance certification.
